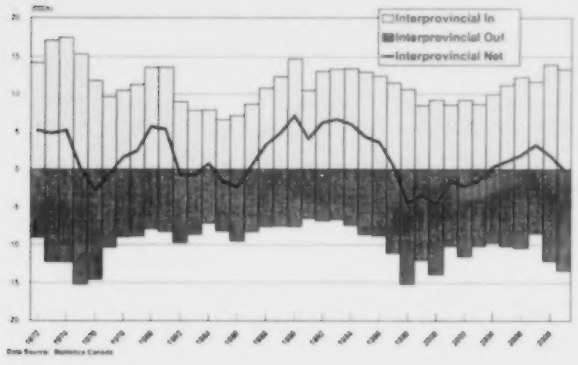
Migration Highlights ◆ First Quarter 2009

During the first quarter of 2009 the population of British Columbia grew by an estimated 15,370 persons, resulting in an April 1st, 2009 total population of 4,435,344. This growth in population was primarily due to gains from international migration, along with a small excess of births over deaths, while inter-provincial migration was slightly negative.

B.C.'s population grew at a rate of 1.7 percent between the first quarter of 2008 and 2009, ranking second among provinces behind Alberta (+2.7 percent) and ahead of the Yukon (+1.7 percent). The average growth across Canada was +1.2 percent.

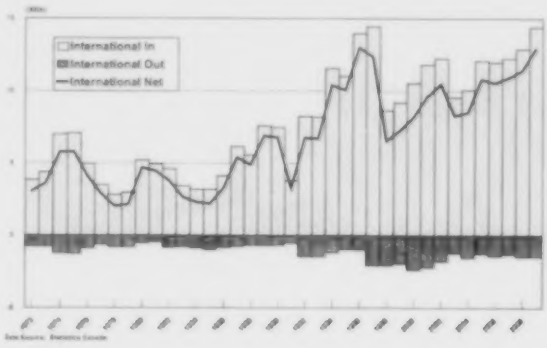
Fig 1: Inter-provincial Migration 1st Quarter



During the first quarter of 2009, B.C. gained 13,307 and lost 13,323 inter-provincial migrants, resulting in a slight decline in net inter-provincial migration of -13.

B.C. had a net inter-provincial loss of population during the first quarter to Alberta, Saskatchewan, the Atlantic Provinces, and the Territories. In net terms, the largest number of in-migrants to the province arrived from Ontario (902).

Fig 2: International Migration 4th Quarter



Net international migration continued as the main contributor to B.C.'s population growth over the January to April period. A total of 12,895 persons were added to B.C.'s population as a result of international migration over the quarter. This is the highest level B.C. has experienced in a first quarter since 1996. This large increase was due mostly to a gain of 5,650 net non-permanent residents, which is also the highest estimate for a first quarter. The number of immigrant arrivals, 8,755 persons (down from 10,087 in the first quarter of 2008), comprised 17.2 percent of Canada's total arrivals during the quarter.

Natural increase (the excess of births over deaths) added 2,475 persons to the population. While births were up slightly compared with the first quarter of 2008, deaths declined from the same period in 2008.

Population Change
First Quarter 2009

Population: January 1, 2009	4,419,974
Plus Interprovincial Arrivals	13,307
Minus Interprovincial Departures	-13,323
Plus Immigrants	8,755
Minus Total Net Emigrants	-1,494
Plus Net Non-Permanent Residents	5,650
Plus Births	10,666
Minus Deaths	-8,191
Population April 1, 2009	**4,435,344**

Regional Migration

Unlike international migration, which is largely concentrated in the lower mainland, interprovincial migration (between other provinces) and intraprovincial migration (between regions within BC) have a more widespread impact on population change. Estimates of migration at the regional district[1] (RD) level are now available for July 1, 2007 to June 30, 2008.

Interprovincial Migration

During this period, B.C. experienced positive net interprovincial migration, gaining 11,458 people from other parts of Canada. This resulted from an inflow of 67,394 and an outflow of 55,936 interprovincial migrants. Among RDs, 20 of 28 experienced positive net interprovincial migration. Table 1 lists interprovincial migration flows for a selection of age groups.

Source: Statistics Canada

[1] The Comox Valley and Strathcona Regional Districts are combined here into "Comox-Strathcona".

The region with the highest net interprovincial migration was Central Okanagan RD, which includes the city of Kelowna, with a net inflow of 2,240 individuals. The Greater Vancouver RD had by far the largest flow of interprovincial movers, with 24,998 interprovincial in-movers and 22,821 out-movers.

Of the eight regions experiencing a net interprovincial outflow, all have a heavy dependence on the resource sector, which did not fare well during the year. The Northern Rockies RD had the largest population loss, with a 151 net leavers. The Fraser-Fort George RD suffered a loss of similar magnitude, but given that since 1996 this region has lost an average of about 600 individuals per year through interprovincial migration, an outflow of 143 is modest.

Intraprovincial Migration

A total of 92,802 British Columbians moved to a different RD during 2007-2008. Of the RDs, 11 were net sources of intraprovincial migrants, and 17 were net destinations. The top net gainer of intraprovincial migrants was the Fraser Valley RD, which includes the municipalities of Abbotsford and Hope. As with interprovincial migration, Central Okanagan was among the

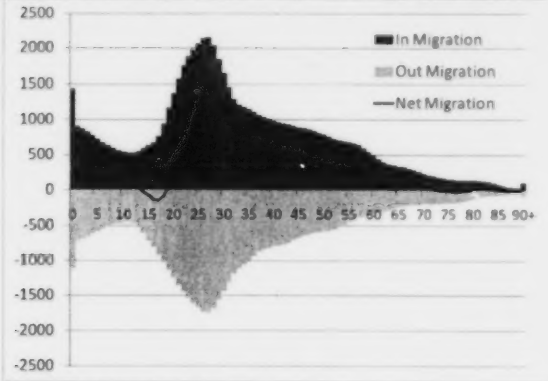
Source: Statistics Canada

top destinations for intraprovincial migrants. On the negative side, the Greater Vancouver RD was by far the largest source of intraprovincial migrants, with a net outflow of nearly 6,000 people. Such an outflow is not exceptional for the Greater Vancouver RD. High inflows of international migrants and gains from interprovincial migration are usually more than enough to offset any intraprovincial losses for this region.

Age of Migrants

Migrants are most often people in their late teens to mid-twenties, usually moving away from their childhood home, seeking education or employment. Thereafter, those between 25 and 44 often move again to start families of their own, in search of work, or to improve their housing. Between 45 and 64, people tend to move as children leave the home and in some cases, as work is no longer required. After 65, people may move due to retirement, sometimes moving away from high density areas to places outside of high commuter flows, or they may move to be closer to amenities.

Figure 1: Interprovincial Migration Age Distribution

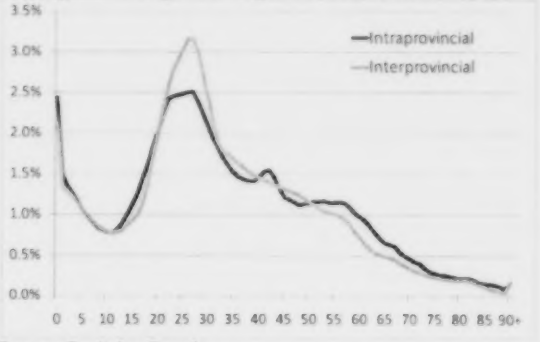


Source: Statistics Canada

Interprovincial migration during the 2007-2008 period was positive for all age groups, except some modest losses among youths in their late teens and some elderly over 75. The peak of net migration coincides with the peak of in and out flows among 20-30 year olds.

Standing out from the other RDs, Squamish-Lillooet had a very young distribution of interprovincial in migrants; 18 to 24 year olds made up 32 percent of inflows to the region, while this age group comprised only 16 percent of inflow s provincially. A likely explanation for this pattern is the popularity of the area, which includes Squamish and Whistler, as an outdoor recreation destination, as well as significant construction and development in preparation for the 2010 Olympic Games.

Figure 2: Migration Age Distribution of Inflows



Source: Statistics Canada

The age distribution of intraprovincial migrants exhibits a similar pattern to that of interprovincial migrants, but with less weight given to young adults. Individuals over 45 make up a larger proportion of intraprovincial migrants than interprovincial migrants. Moves within the province may be less costly, both financially and socially, and therefore more desirable with older people who tend to be more established in an area.

While the Greater Vancouver RD had the largest net outflow of intraprovincial migrants, among 18 to 24 year olds there was a net inflow. It appears the most urban area in the province, with concentrated education and

career opportunities, appeals to these younger individuals. The highest net gain of individuals over the age of 65 was in the Fraser Valley RD, where inflows of 947 resulted in a net increase of 285 persons in this age group.

Prepared by: Population Section, BC STATS. Date: 23 June 2009

Source: Statistics Canada. Note: Net N.P.R. - Net change in the number of Non-Permanent Residents.

Due to revisions on the part of Statistics Canada, the sum of the components may not equal the population change.

"-" indicates no data available. All figures subject to revision.
